Profile

I am a DevOps Specialist with extensive experience in end-to-end infrastructure management and automation across **AWS, Azure, and GCP** platforms. I specialize in designing robust **CI/CD pipelines**, orchestrating containers with **Kubernetes**, and implementing comprehensive system security. With a proven track record in both **Linux and Windows** environments, I focus on delivering high-performance solutions and ensuring system reliability through advanced monitoring. I am passionate about driving **operational agility** and applying strategic approaches to build future-proof technological infrastructures while thriving in collaborative, cross-functional team environments.

Professional Experience

IT intern, Akplas Plastik San. ve Tic A.Ş

Jul 2021 – Sep 2021

- Gained hands-on experience in system administration, focusing on maintaining and troubleshooting IT systems.
- Worked on network performance optimization and basic data security measures.
- Assisted in day-to-day IT operations, ensuring smooth functioning of infrastructure.

Kocaeli, Türkiye

Junior System Administrator(Outsource), Bilişim Vadisi

Aug 2022 – Apr 2024

- Managed **Linux** and **Windows** systems, ensuring optimal performance and reliability.
- Contributed to the development and maintenance of **Bivabu Cloud Infrastructure**, focusing on hardware, virtualization, and open-source services.
- Supported the management of IT infrastructure for **42 Schools** under Bilişim Vadisi, collaborating on network design and system optimization.
- Provided end-to-end system administration support for various Bilişim Vadisi projects, ensuring seamless operations.

Kocaeli, Türkiye

Junior System Administrator,

Feb 2022 – Apr 2024

Dijitohum Teknoloji Stratejik İş Geliştirme Mühendislik ve Danışmanlık A.Ş.

Kocaeli, Türkiye

- During the time I worked at Dijitohum, I was dedicated to the projects of the Bilişim Vadisi.

Devops Specialist, Ayti.Tech

Apr 2024 – present

- Built and automated cloud infrastructures using AWS, Azure, and Terraform.
- Streamlined deployments with CI/CD pipelines using Jenkins and GitHub Actions.
- Managed containerized applications with Docker and Kubernetes.
- Ensured system reliability with monitoring tools like Prometheus and Grafana.

Istanbul, Turkey

Education

Bachelor Degree, Kocaeli Üniversitesi
Information System Engineering

Sep 2019 – 2024
Kocaeli, Türkiye

Languages

- English

Projects

Bilişim Vadisi Bivabu Cloud, Bivabu Cloud

Aug 2022 – present

As Dijitohum, we support Bilişim Vadisi in the process of establishing its own cloud infrastructure. Within the scope of this project, I have been playing a role in the processes in the Bilişim Vadisi for more than a year. From the very beginning of the processes, I have been involved in areas such as hardware, virtualization, open source services, linux layer. And this process has provided me with a good experience.

Bilişim Vadisi Mobile Application Infrastructure

Aug 2023 – Oct 2023

Within the scope of this project, I carried out processes such as resource analysis for mobile application, establishment of services, design and implementation of network structure, reverse proxy server installation.

Turcorn100 Infrastructure [🔗](#)

I contributed to the infrastructure work and devops processes of the relevant website.

Skills

- Linux
- Xen
- AWS
- Monitoring and Logging
- Google Cloud
- Bash Scripting
- Vmware
- CI/CD Tools
- Networking & Security
- Virtualization
- Version Control (Git)
- Configuration Management
- Containerization
